Vehicle Exhaust Extraction System

V01

wolter

Wolter Vehicle Exhaust Extraction Fan - VE, VD

Fan type code

VE 320 - 30

Impeller No.

Model size

Motor type:

E = Single - phase

D = Three - phase

Vehicle Exhaust
Extraction Fan

Design features

VE / VD Direct driven fan are single inlet fans for vehicle exhaust extraction systems application.

Casing

The machine folded scroll is made of galvanized sheet steel as standard. Predrilled holes are located in the side plates to fix mounting frames. It provides for easy installation.

Impeller

The torsion-resistant impellers guarantee a high standard of technology regarding volume flows and processing. The impellers with the shaft are statically and dynamically balanced on precision machines according to quality standard Q 2.5 of VDI 2060, AMCA 204 & ISO 14694. The backward curved impellers are made of steel with powder coated or galvanized / stainless steel as option. All impellers guarantee highest

peripheral speed. The aero dynamical design stands for the precision of these modern high efficiency impellers.

Motor

IEC motors of protection Class IP55, insulation class F & optional Class H for operating at higher ambient temperatures can be offered.

Performance curves

The performance curves have been established using the outlet test method in the test chamber according to AMCA 210 installation B (free inlet, ducted outlet).

Sound level

The sound power level dB(A) figures shown on the performance curve are measured from the fan casing with connected ducts on both inlet and outlet side according to AMCA 300.

Wolter Vehicle Exhaust Extraction System

The value of clean air

Exposure to hazardous vehicle exhaust emissions can cause serious health problems for you and your employees. The most efficient way to combat that exposure is to capture the exhaust fumes at the source and eliminate contact with harmful pollutants.

Wolter offers various systems that capture, extract and remove gas and diesel exhaust emissions, creating a cleaner and healthier work environment for your personnel.

Meeting the standards

- › EPA - Environmental Protection Agency has classified benzene as a known human carcinogen for all routes of exposure. OSHA - Occupational Safety & Health Administration states that an employer shall assure that no employee is exposed to an airborne concentration of benzene in excess of 1 part of Benzene per million parts of air (1 ppm) as an 8-hour time-weighted average. www.epa.gov & www.osha.gov.
- › CDC - Centers for Disease Control & Prevention reports that exhaust from any improperly maintained vehicle can pose serious hazards. The most common source of carbon monoxide is automobile exhaust vented in confined spaces. Proper ventilation and prevention must be assured. www.cdc.gov.
- › NIOSH - National Institute for Occupational Safety & Health states that there can be no safe level of exposure to a carcinogen; therefore the NIOSH Threshold Limit Value is "lowest feasible level". www.cdc.gov/niosh.
- › WHO - World Health Organization and the IARC - International Agency for Research on Cancer, classified diesel engine exhaust as carcinogenic to humans (Group 1), based on sufficient evidence that exposure is associated with an increased risk for lung cancer. www.iarc.fr.
- › ISO 9001:2008, UL, CE, AMCA International.

Wolter systems are designed to meet or exceed these standards.

The Difference

We can provide installations for source capture and ventilation systems in various industries including:

- › Military Facilities
- › Automobile Plants
- › Department of Transportation Facilities
- › Motorcycle / ATV Garages
- › Emergency Service Stations
- › Fleet Service & Repair Bays
- › Agricultural Equipment Facilities
- › Bus Depots

About diesel exhaust

- › The World Health Organization (WHO) classified diesel engine exhaust as carcinogenic to humans, based on sufficient evidence that exposure is associated with an increased risk for lung cancer.
- › The EPA has determined that the size of the average diesel exhaust particle size is 0.2 microns. These particles are typically not visible to the human eye.
- › Diesel exhaust particles are often too small to be captured by onboard filters. Toxic gases are not captured by particulate filters, and only partially by activated carbon filters. The Wolter source capture system captures these particles and gases before they enter a facility, and expels them to the outside.
- › Diesel exhaust particles and gases are suspended in the air, so exposure to this pollutant occurs whenever a person breathes air that contains these substances. This also occurs when an individual touches a surface where these particles have settled into.
- › Like all fuel-burning equipment, diesel exhaust contains nitrogen oxides. Nitrogen oxides can damage lung tissue, lower the body's resistance to respiratory infection and worsen chronic lung diseases, such as asthma.

Wolter Vehicle Exhaust Extraction System

Spring Operated Vehicle Exhaust Hose Reel

- VHS Series

Spring operated exhaust reel systems are recommended for smaller working areas.

Service technician pulls down exhaust hose and attaches nozzle to vehicle. When finished, pull on hose again and it smoothly retracts the hose.

Single spring module:

Max. load: 18.00 kg

Double spring module:

Max. load: 36.00 kg

Vehicle Exhaust Motorized Hose Reel

- VHM Series

When your workshop has a high ceiling, in order to facilitate larger vehicles, you will need a hose reel that can wind the hose all the way back on the reel.

With no hoses hanging down you can also operate other appliances in the workshop such as cranes or lifts.

Std duty:

0.37kW-6P,
380~440V/3/50Hz, 1,30A,
910rpm, max load 34kg

0.55kW-6P,
220~240V/1/50Hz, 3,61A,
920rpm, max load 34kg

Heavy duty:

0.55kW-6P,
380~440V/3/50Hz, 1,86A,
910rpm, max. load 50kg

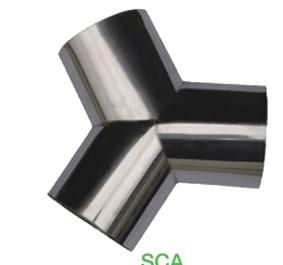

Nozzles and accessories

Our nozzle range is designed to deal with the characteristics of exhaust gases, with the single purpose of keeping these harmful gases out of the human breathing zone.

The nozzles can be used on moving or stationary vehicles, and for a wide number of exhaust pipes, which can be horizontally or vertically positioned. Our wide range of nozzles fit to all commonly used exhaust pipes.

Features

- › All nozzles are easy and quick to connect or disconnect.
- › The metal nozzles are capable of handling high exhaust temperatures.
- › Special outlets in the rubber nozzles for emission testing.
- › Available for a range of different hose diameters.
- › Various ways to connect to the vehicle.
- › Quick disconnect fittings available to allow rapid / easy nozzle swap out.

Technical Data

Vehicle Exhaust Hose - EH

Design:

- › special plastic-profile supporting spiral
- › wall thickness approx. 0.4mm (~0.015 in)
- › fabric-reinforced tape; wall: EPDM / PP coated fabric

Application:

- › flexible hose / ducting for hot gases
- › engine test bench, exhaust gas measurement
- › vehicle/ car gas exhaust system, gas extraction: hose reel, slotted floor channel, underfloor extraction system

Properties:

- › crush resistant
- › fabric reinforced
- › vibration resistant
- › conforms to RoHS guideline
- › highly flexible + compressible
- › good resistance to chemicals
- › protected, flow-optimizing exterior folds
- › exhaust gas temperatures to 200°C(~390°F)

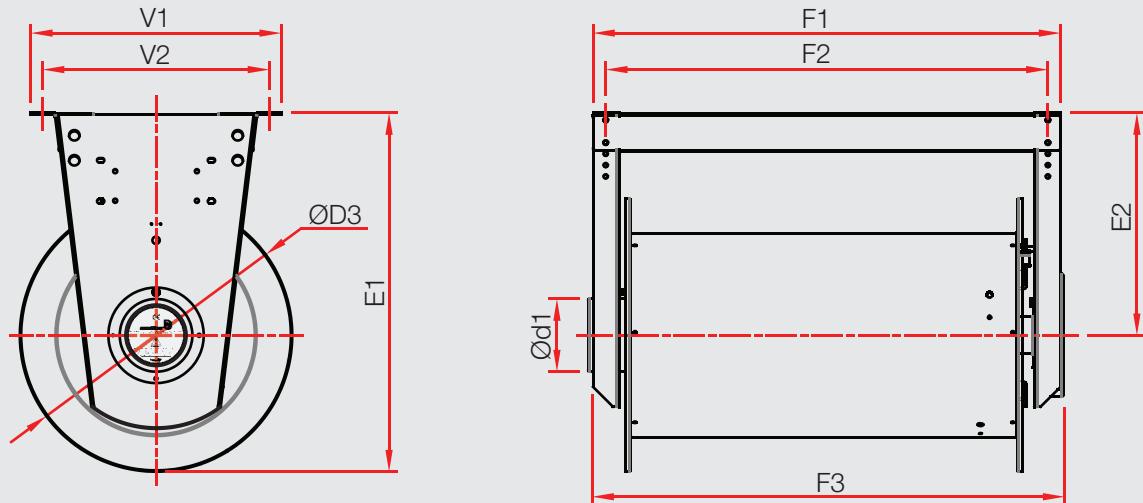

EH Hose Standard Color: Black
